**Subject:** CFAC Sampling

Columbia Falls Aluminum Team –

I want to let you know that we're moving forward with a second removal assessment sampling event in the neighborhood down gradient of the facility (Aluminum City) next week. I've left a message for Steve Wright with CFAC to let him know and to provide information in the event they'd like to collect split samples (they did in the April sampling event).

The goal of the sampling is to replicate the Fall 2013 sampling event (in which we sampled only a handful of wells in the neighborhood) by sampling again this fall, during the low flow season. You may recall that we had a detection of cyanide in a domestic well during the fall sampling event, but not in the spring sampling event when we sampled approximately 20 wells. Given the disparity in results, we'd like to ensure that we have fall sample results in more than just the handful of wells we sampled last fall.

We should start to prepare an updated comm strat to incorporate this sampling and an upcoming meeting being held by MDEQ to discuss their progress with Glencore on negotiations. Chris, can you update the comm strat?

Let me know if you have any questions or concerns.

Thanks,  
Rob
